

# AutoPac<sup>™</sup> Technology

DISPENSE ONE GLOVE AT A TIME, AS INTENDED

## Benefits of AutoPac<sup>™</sup>

- ✓ Eradicates contamination
- ✓ Saves cost as it prevents glove wastage from multiple dispensing
- ✓ Eliminates bulging and clumsy looking glove box
- ✓ Makes glove dispensing easier
- ✓ Enables nicely and neatly stacked gloves

Very often, uneven glove packing makes pulling gloves harder and causes multiple gloves dispensing which will lead to unnecessary wastage as well as contamination.

Uniseal Bio-Nit<sup>®</sup> always starts with the user in mind and touches lives through innovation and taking care of every detail.

AutoPac<sup>™</sup> Technology is a smart packing technology where every glove is alternately layered perfectly, allowing you to dispense one glove at a time, as intended.\*

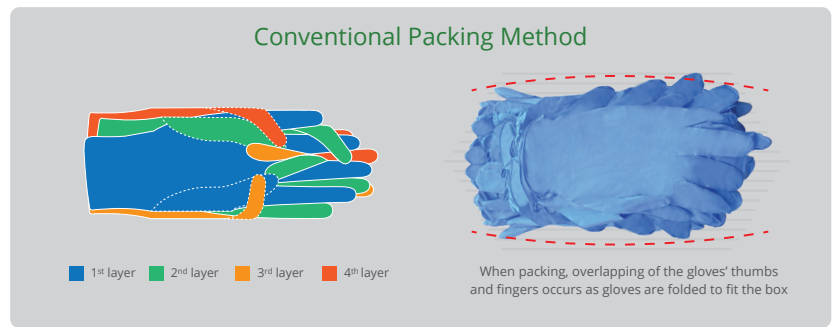

It helps to prevent uneven glove layering and messy packed glove boxes. The fully automated process offers a precise quality control through a scanning process known as Digital Quality System and ensures gloves produced are free from contamination.

\* All care is taken to ensure alternating layering for every single glove. However, due to our process which requires gloves to be inspected offline, some batches may require manual repacking.

## AutoPac™ overcomes multiple dispensing.

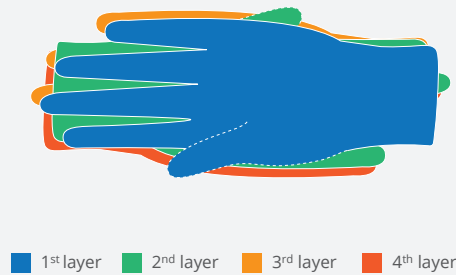

The conventional packing method leads to multiple dispensing.

The untidy and overlapping glove arrangement may cause the wearer to unknowingly pull the gloves from bottom layers resulting in all other top layers to be dispensed together.

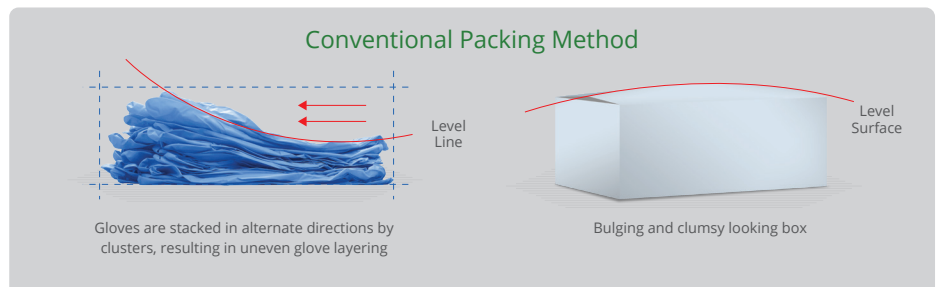

## Innovative AutoPac™ Technology systematically control dispensing of only one glove at a time.

With AutoPac™ alternating layering method, each top layer glove cuff will always completely cover the fingers of its immediate bottom layer glove, exposing only the top most layer for the wearer to pull and therefore preventing accidentally pulling any of the bottom layered gloves.

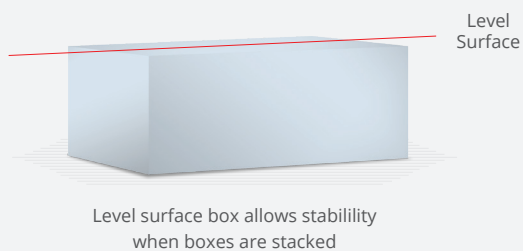

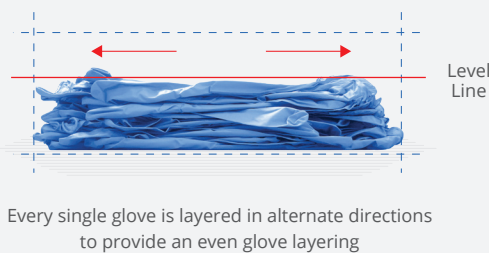

## AutoPac™ Technology produces even and level surface box packed with neatly stacked gloves.

The conventional packing method leads to uneven and bulging box.

## How AutoPac™ Technology ensures an even and level surface box everytime.

## AutoPac™ eliminates contamination.

The fully automated removal process enables AutoPac™ gloves to strip from its former and thus, minimize the human contamination during the entire production process.

**AutoPac™ Technology eliminates wastage and eradicates contamination**
